Terme) in which it openeth but foure dayes be-
fore.*

A T R V E
DESCRIPTION
of the foure Quarters of
this year.

And first of Winter.

© in v^o. m. x.

TH E Winter Quarter according to our English accompt, began the last year 1633. at the time of the Sunnes entrance into Capricorne (viz) the 12. day of December, being Thursday; At which time was the Brumall Solstice, or shortest day in the year, by naturall reason of the Sunnes greatest declination from the Equinoctiall line; which Winter continueth untill the 11. day of March next following, being Tuesday.

This Season of his naturall qualitie is cold, and moist, contrary to the disposition of the Summer, whole enemy it may bee thought to be, for that in all respects it destroyeth choie things, which the warmenes of Summer cherisheth and bringeth forth.

A Prognostication.

The particular disposition thereof may be seene in the daily inclination of the weather.

The Sicknesse of this Quarter are these that follow, and such like; Namely, Rheumes, palsies, catharres paine in the head and belly, coughes, strangullon, paine in the joints, dimnesse of sight, paine in the thighes and knees, weakenesse in the backe, griefe in the breast, stomacke and lungs.

Of the Second Quarter of the yeare,
called the Spring.

○ in V. 8. II.

THIS Second Part of the yeare, called the Spring, which is esteemed the most pleasant, and wholesome part thereof, beginneth this yeare the 11. day of March, being Twesday, at which time, the Sunne making his motion into the beginning of the head of Aries, so causing the vernal Equinoctiall, and making the artificiall day equall with the night, through the world, the Sun rising just at 6. in the morning, and setting at 6. at night: And this Quarter endeth upon Thursday the 12. of June.

hote

Dade 1634.

The naturall disposition of this Quarter, is hot and moist temperately, and likewise very healthfull, and is therefore accompted the fittest time in the yeare to ease diseased: Bodies in, and to restore health againe to those in whome it hath been decayed.

The particular condition thereof may be seene in the daily disposition of the Season.

The common griefes and infirmities likely to molest the bodies of men this Quarter, will not much differ from those before rehearsed in the Winter revolution, besides Plurisies, swellings, stopping of veines, frensies, paine in the lungs, and indriffe, the Hemerods, fluxes of blood at the nostrills, scabbes, byles, meafells, small poxe, with such like.

Of the Third Part of the yeare, called Summer.

☉ in ♋. ♏. ♏.

Summer accompted the third Part of the yeare Astronomicall, beginneth at the Sunnes ingresse into the first minute of Cancer, making the longest day and shortest night in the yeare, which will be this yeare on

A Prognostication.

Thursday the 12. of Iune. Now is the Summer Solstice, which maketh the longest day and shortest night in the yeare, by reason of the Suns great declination to the North from the Equinoctiall; which Season continueth untill the 13. day of September, at which time the Sunne mooveth into the first face of Libia.

This Quarter, according to his proper nature, is hot and drye, compared to Chol-ler, turning the humors of mens bodies from coldnesse and moisture, to heate and drynesse, and spreadeth them abroad in each part of the same.

As for the present disposition of the weather, you may plainly see it in the daily disposition.

Touching sicknesse and bodily griefes, some of them will now likewise prevaile which before raigned in the Spring; and what diseases almost may there be named, which are not now afflicting mens bodies; as hot Apoplethumes and inflammations, divers sortes of agues, & other hot diseases, as the pestilence, fevers, extreame gripings in the stomacke, and belly, with many other sharpe diseases.

Dade 1634.

Of the Fourth Part of the year, called
Autumne, or fall of the lease.

© 422. m. 7.

HArvest or Autumne, otherwise called the fall of the lease, Being the last part or Quarter of this year, beginneth the 13. day of September, being Saturday; at which time the Sunne maketh his progres into Libra, the second Equinoctiall Signe, and so causeth the day and night to be of equall length, as before when the Sunne entred into Aries, he rising just at fixe of the clocke in the morning, and setting at fixe at night: And so this Quarter of Autumne, doth continue till the 12. day of December next ensuing; at which time the next hyemall or common Winter part shall begin to take place.

This season, (according to Natures operation) is cold and dry, contrary to the naturall inclination of the Spring, and is the most dangerous time of the year, and the begetter of most deadly infirmities.

How the ayre will be inclined throughout all Harvest, may be seene in the daily disposition thereof.

A Prognostication.

This time of the yeare, are many grievous and troubleſome Sickneſſes raigning, as quotidian and quartine Agues, Blacke Iaundies, Crampes, Conuultions, Conſumptions, the Goute, Scitica, emrod, mea ells, ſmall pocks, wind neſſe abut the midriffe, with other ſickneſſes very grievous.

A Briete Deſcription how the Planets are placed above the Carth in the Skie, for every Moneth a ter Sun-ſetting, or before his riſing; by which you may perceive how they keepe their motion day & night all the yeare. Moreover, the New, Full, and Quarters of the Moone; with Aſtrogicall judgment of the weather for each day of the yeare.

*Alſo Husbandry Inſtructions for each
Month of the
yeare.*
